Celebrazioni del trentennale del Programma per l'Ambiente e l'Azione per il Clima (LIFE)

## Removal of As from water using innovative BIO-adsorbents produced from byproducts of the agro-industrial sector (01/09/2020 - 31/08/2023)

### Coordinating Beneficiary:

Eco Recycling S.r.l.

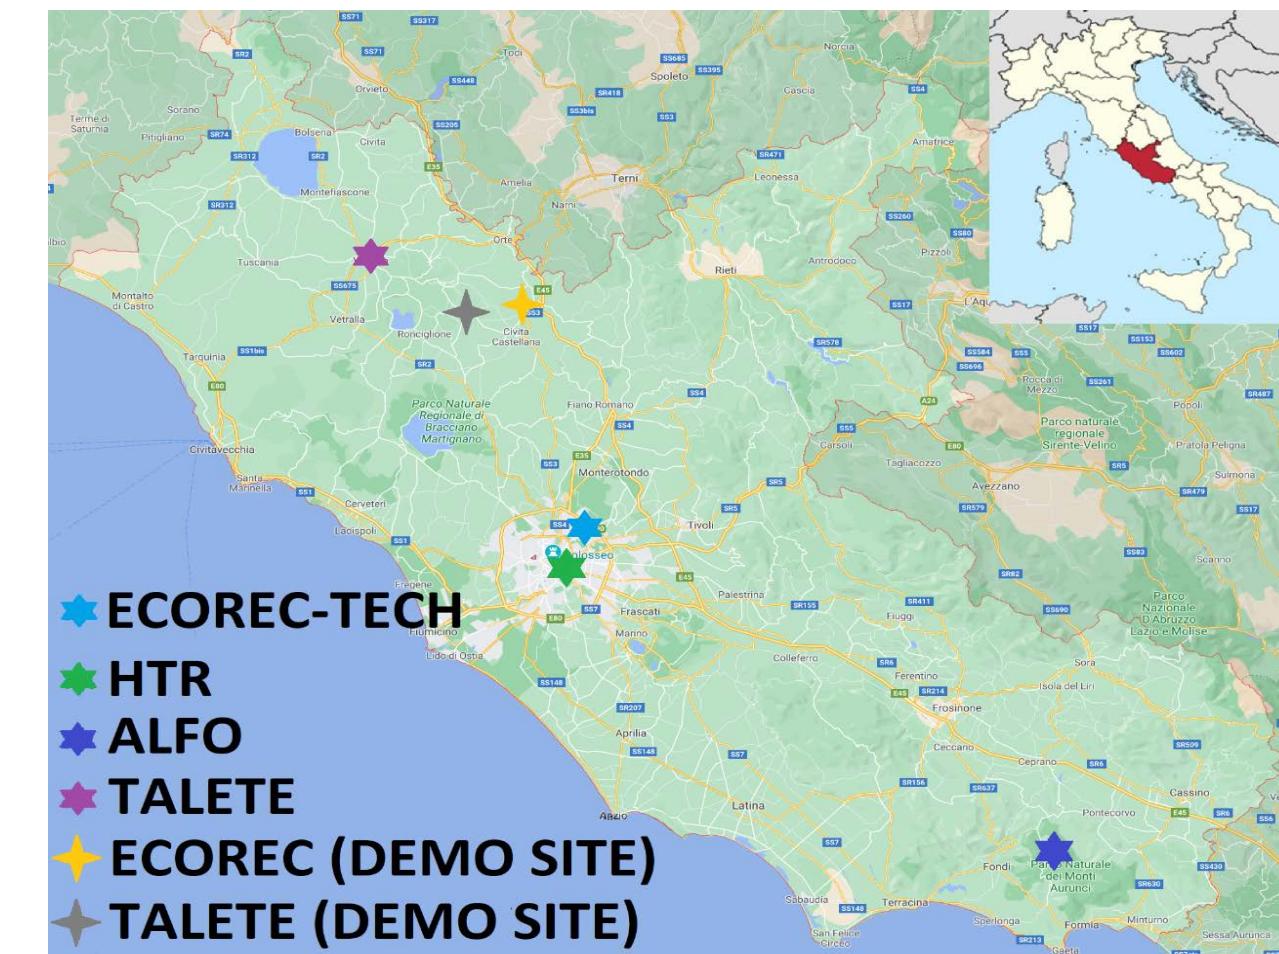

Spin off company of Sapienza University of Rome

Mission: technology transfer for recycling processes

### Associated Beneficiaries:

- ALFO ENERGIA (*energy production and biomasses management*)
- High Tech Recycling Research Centre
- TALETE SpA (*management of public water in Viterbo Province*)
- Technosind S.r.l. (*engineering for technology transfer*)
- Universidade de Évora (*experts in activation and granulation*)

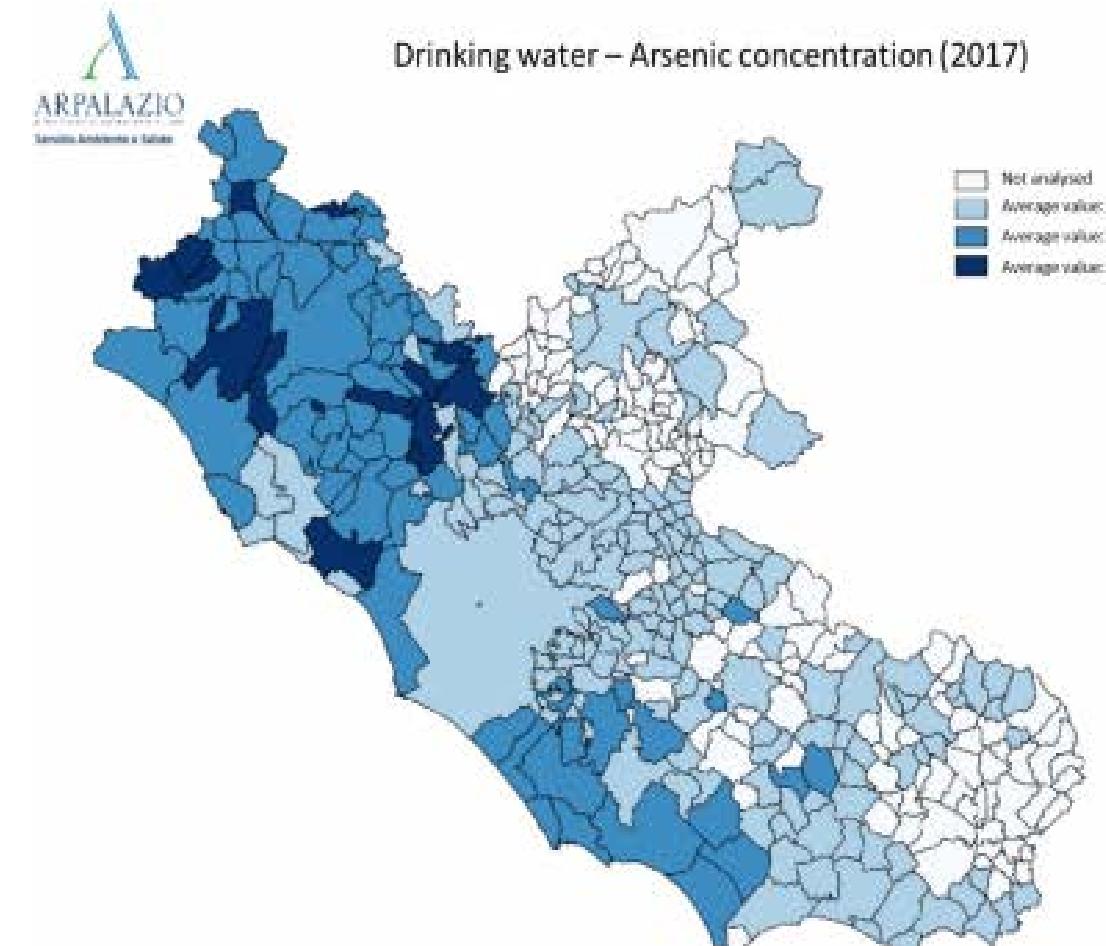

## ENVIRONMENTAL PROBLEM TARGETED

Arsenic contamination of groundwaters due to antropogenic and natural sources.

EU has fixed As limit in drinking water to **10 µg/L**  
(Directive 98/83/CE).

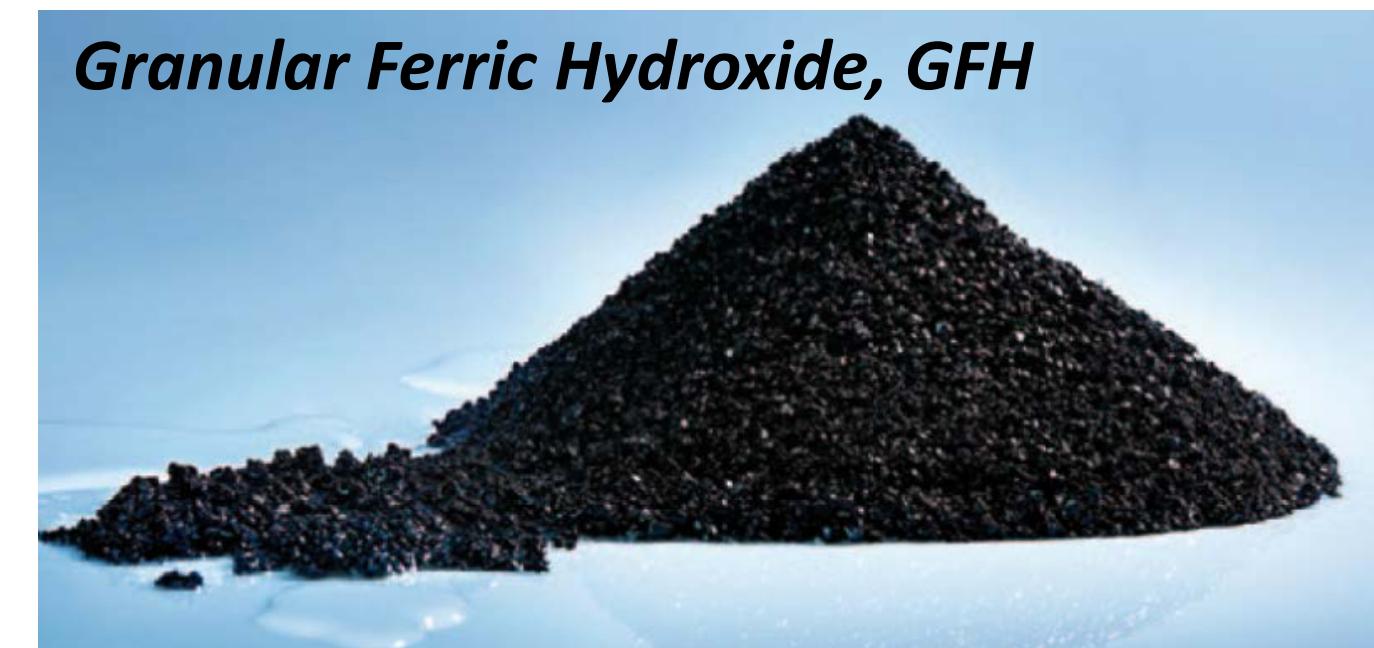

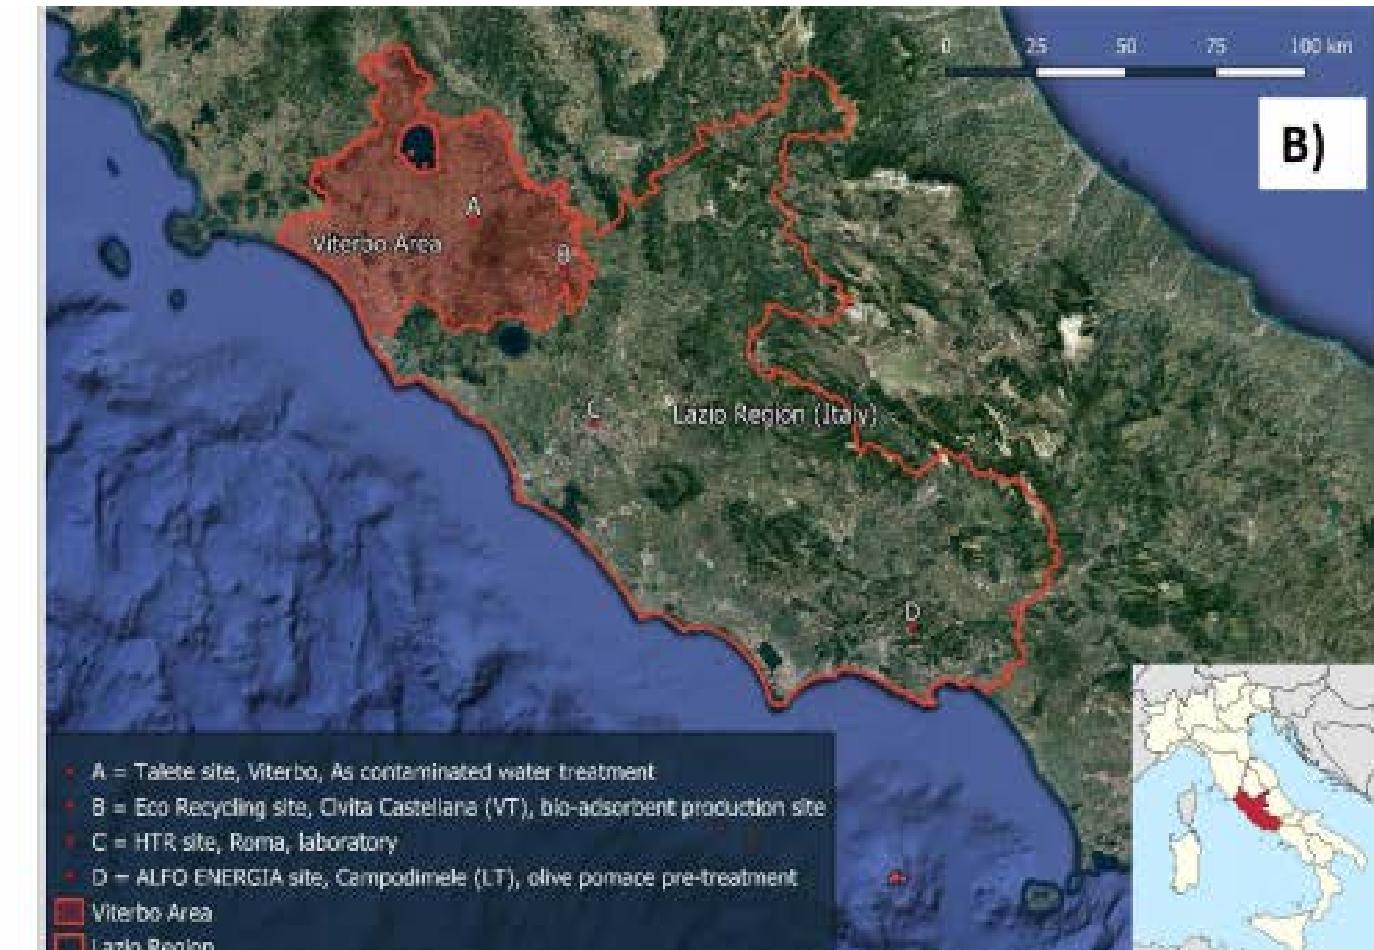

Several EU areas are still exceeding such limits:  
**10-1500 µg/L** have been found in regions of Italy, Greece, Croatia, Germany, Portugal and other countries.

*Current treatments use Fe oxide sorbents*

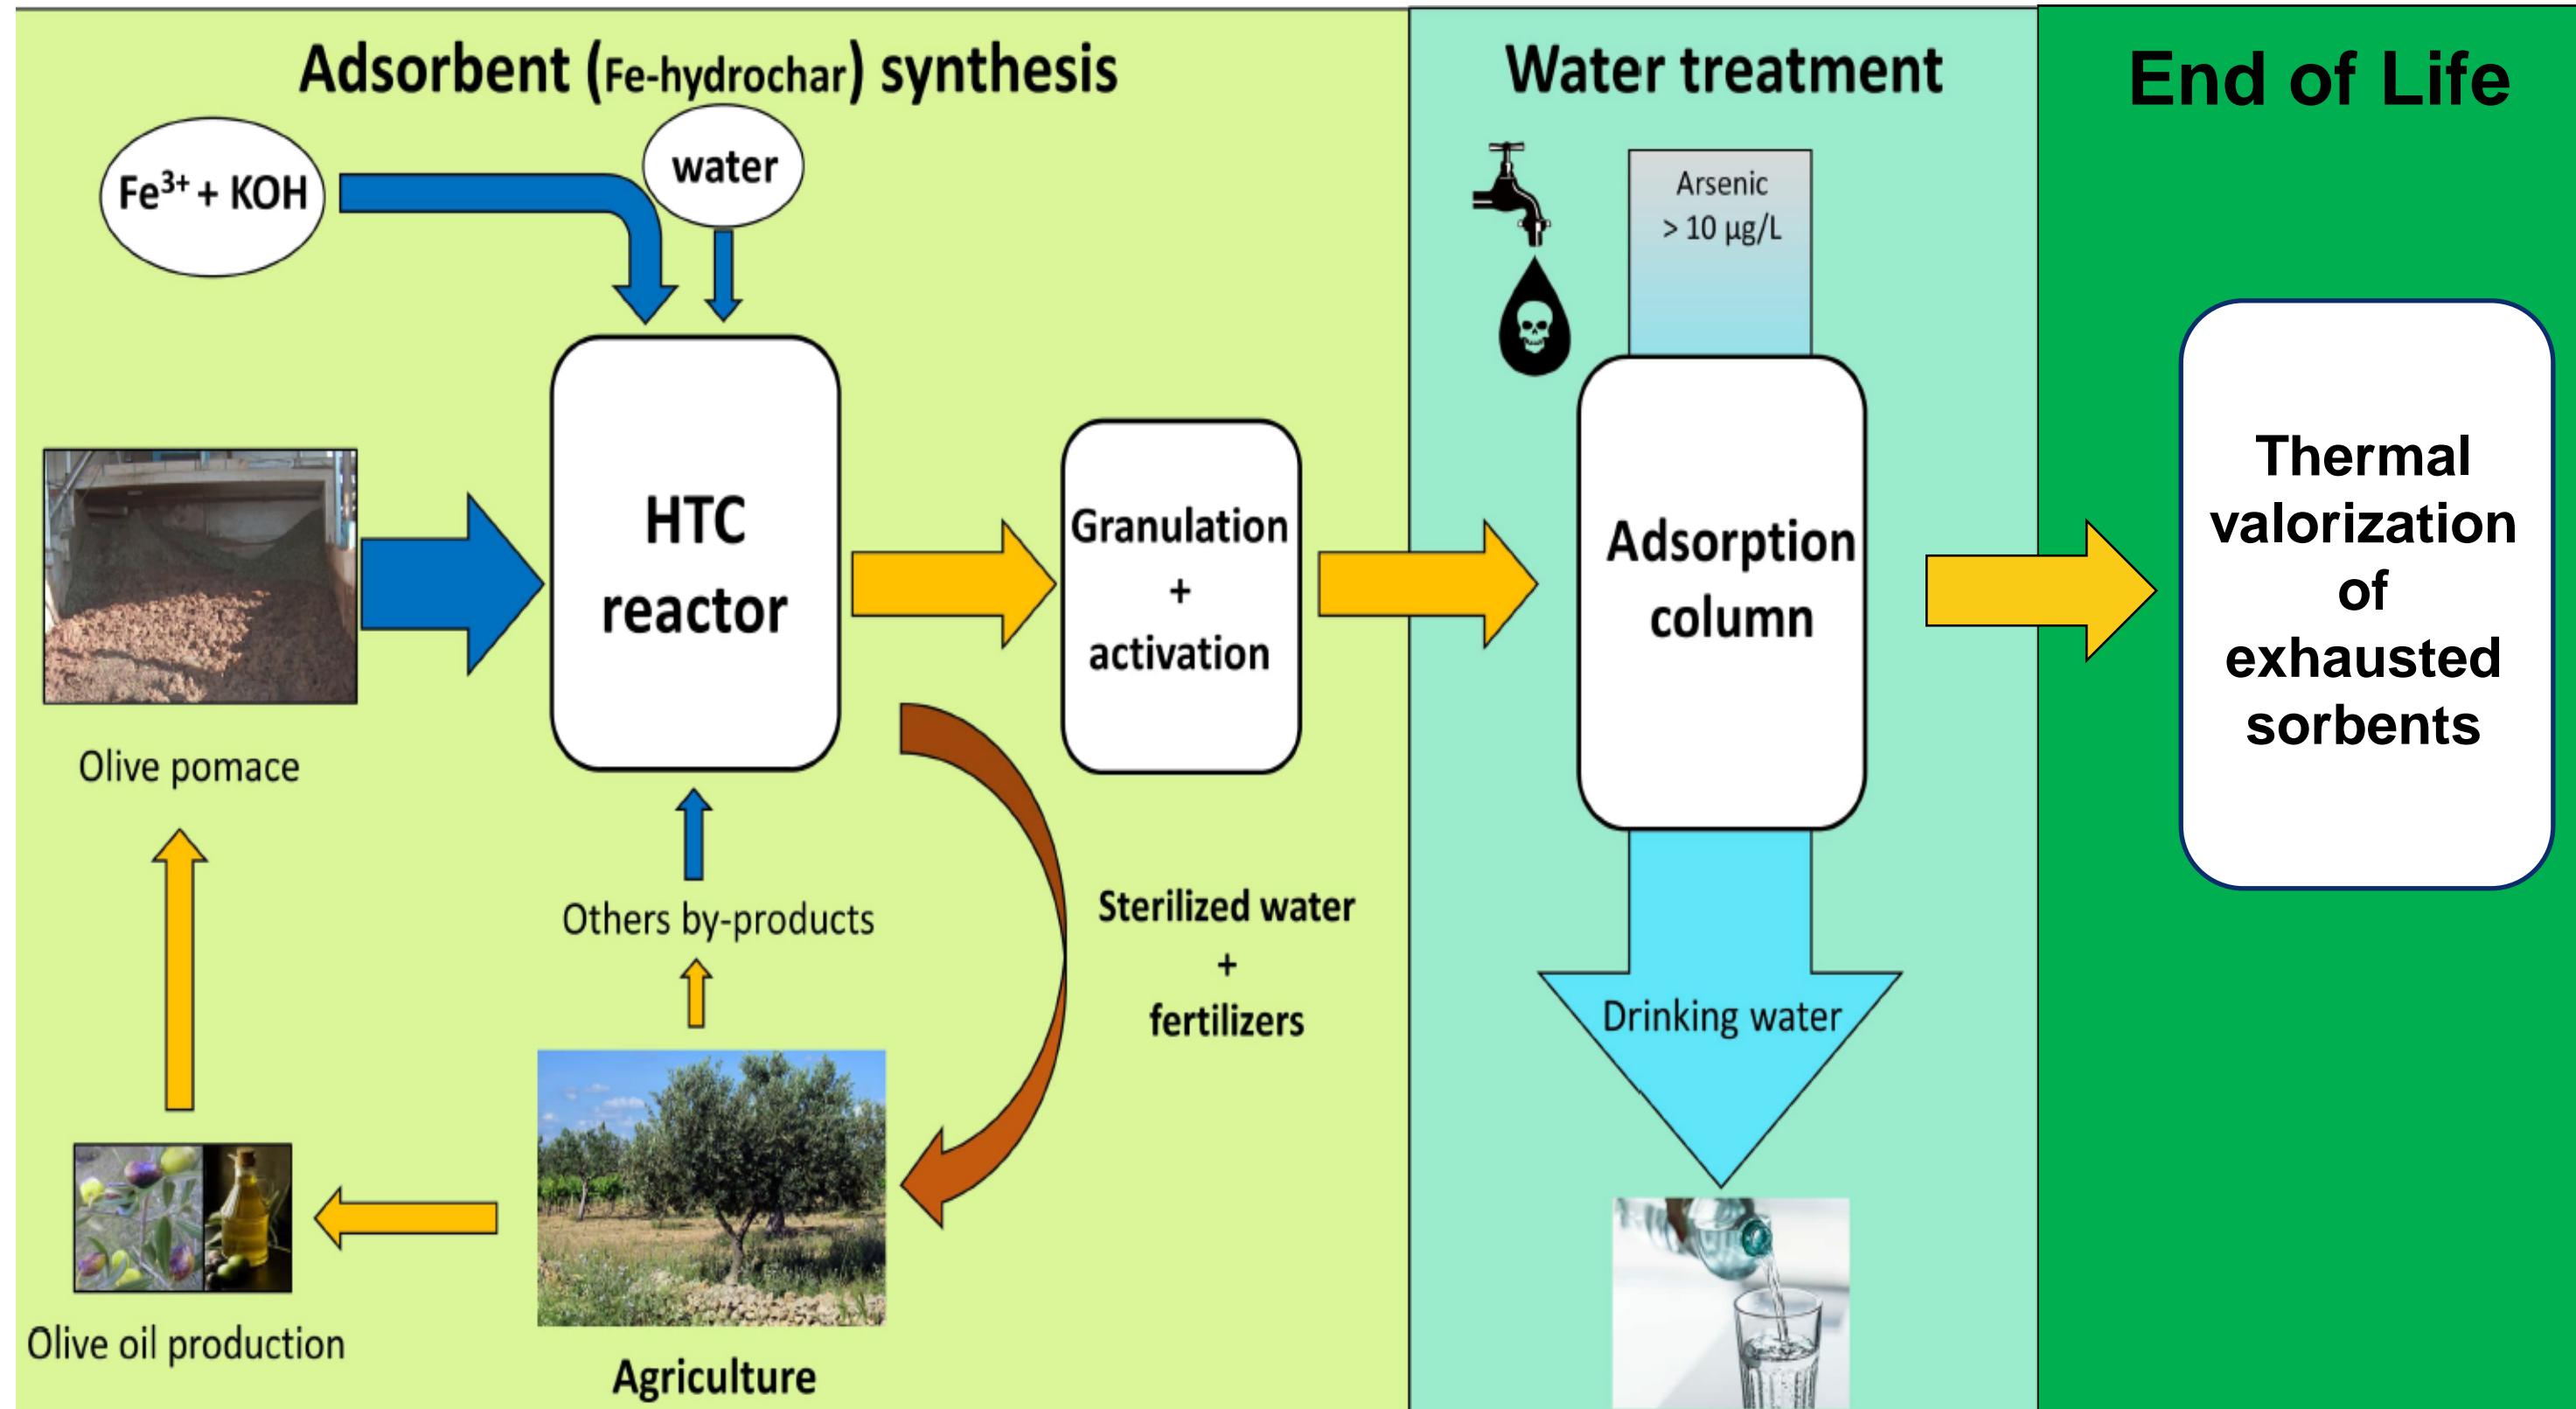

**9.5-12.8 €/kg ( $\cong$ 50% OPEX for treating As-containing drinking waters)**

*No efficient regeneration technique*

## Solution proposed: low-cost adsorbent for As removal (Fe-hydrochar)

## 6 points of strength from an environmental point of view

**1**

Using a by-product of olive oil production

**2**

Reducing primary resource consumption (6% of Fe vs 60%)

**3**

Using an energy saving carbonization technology

**4**

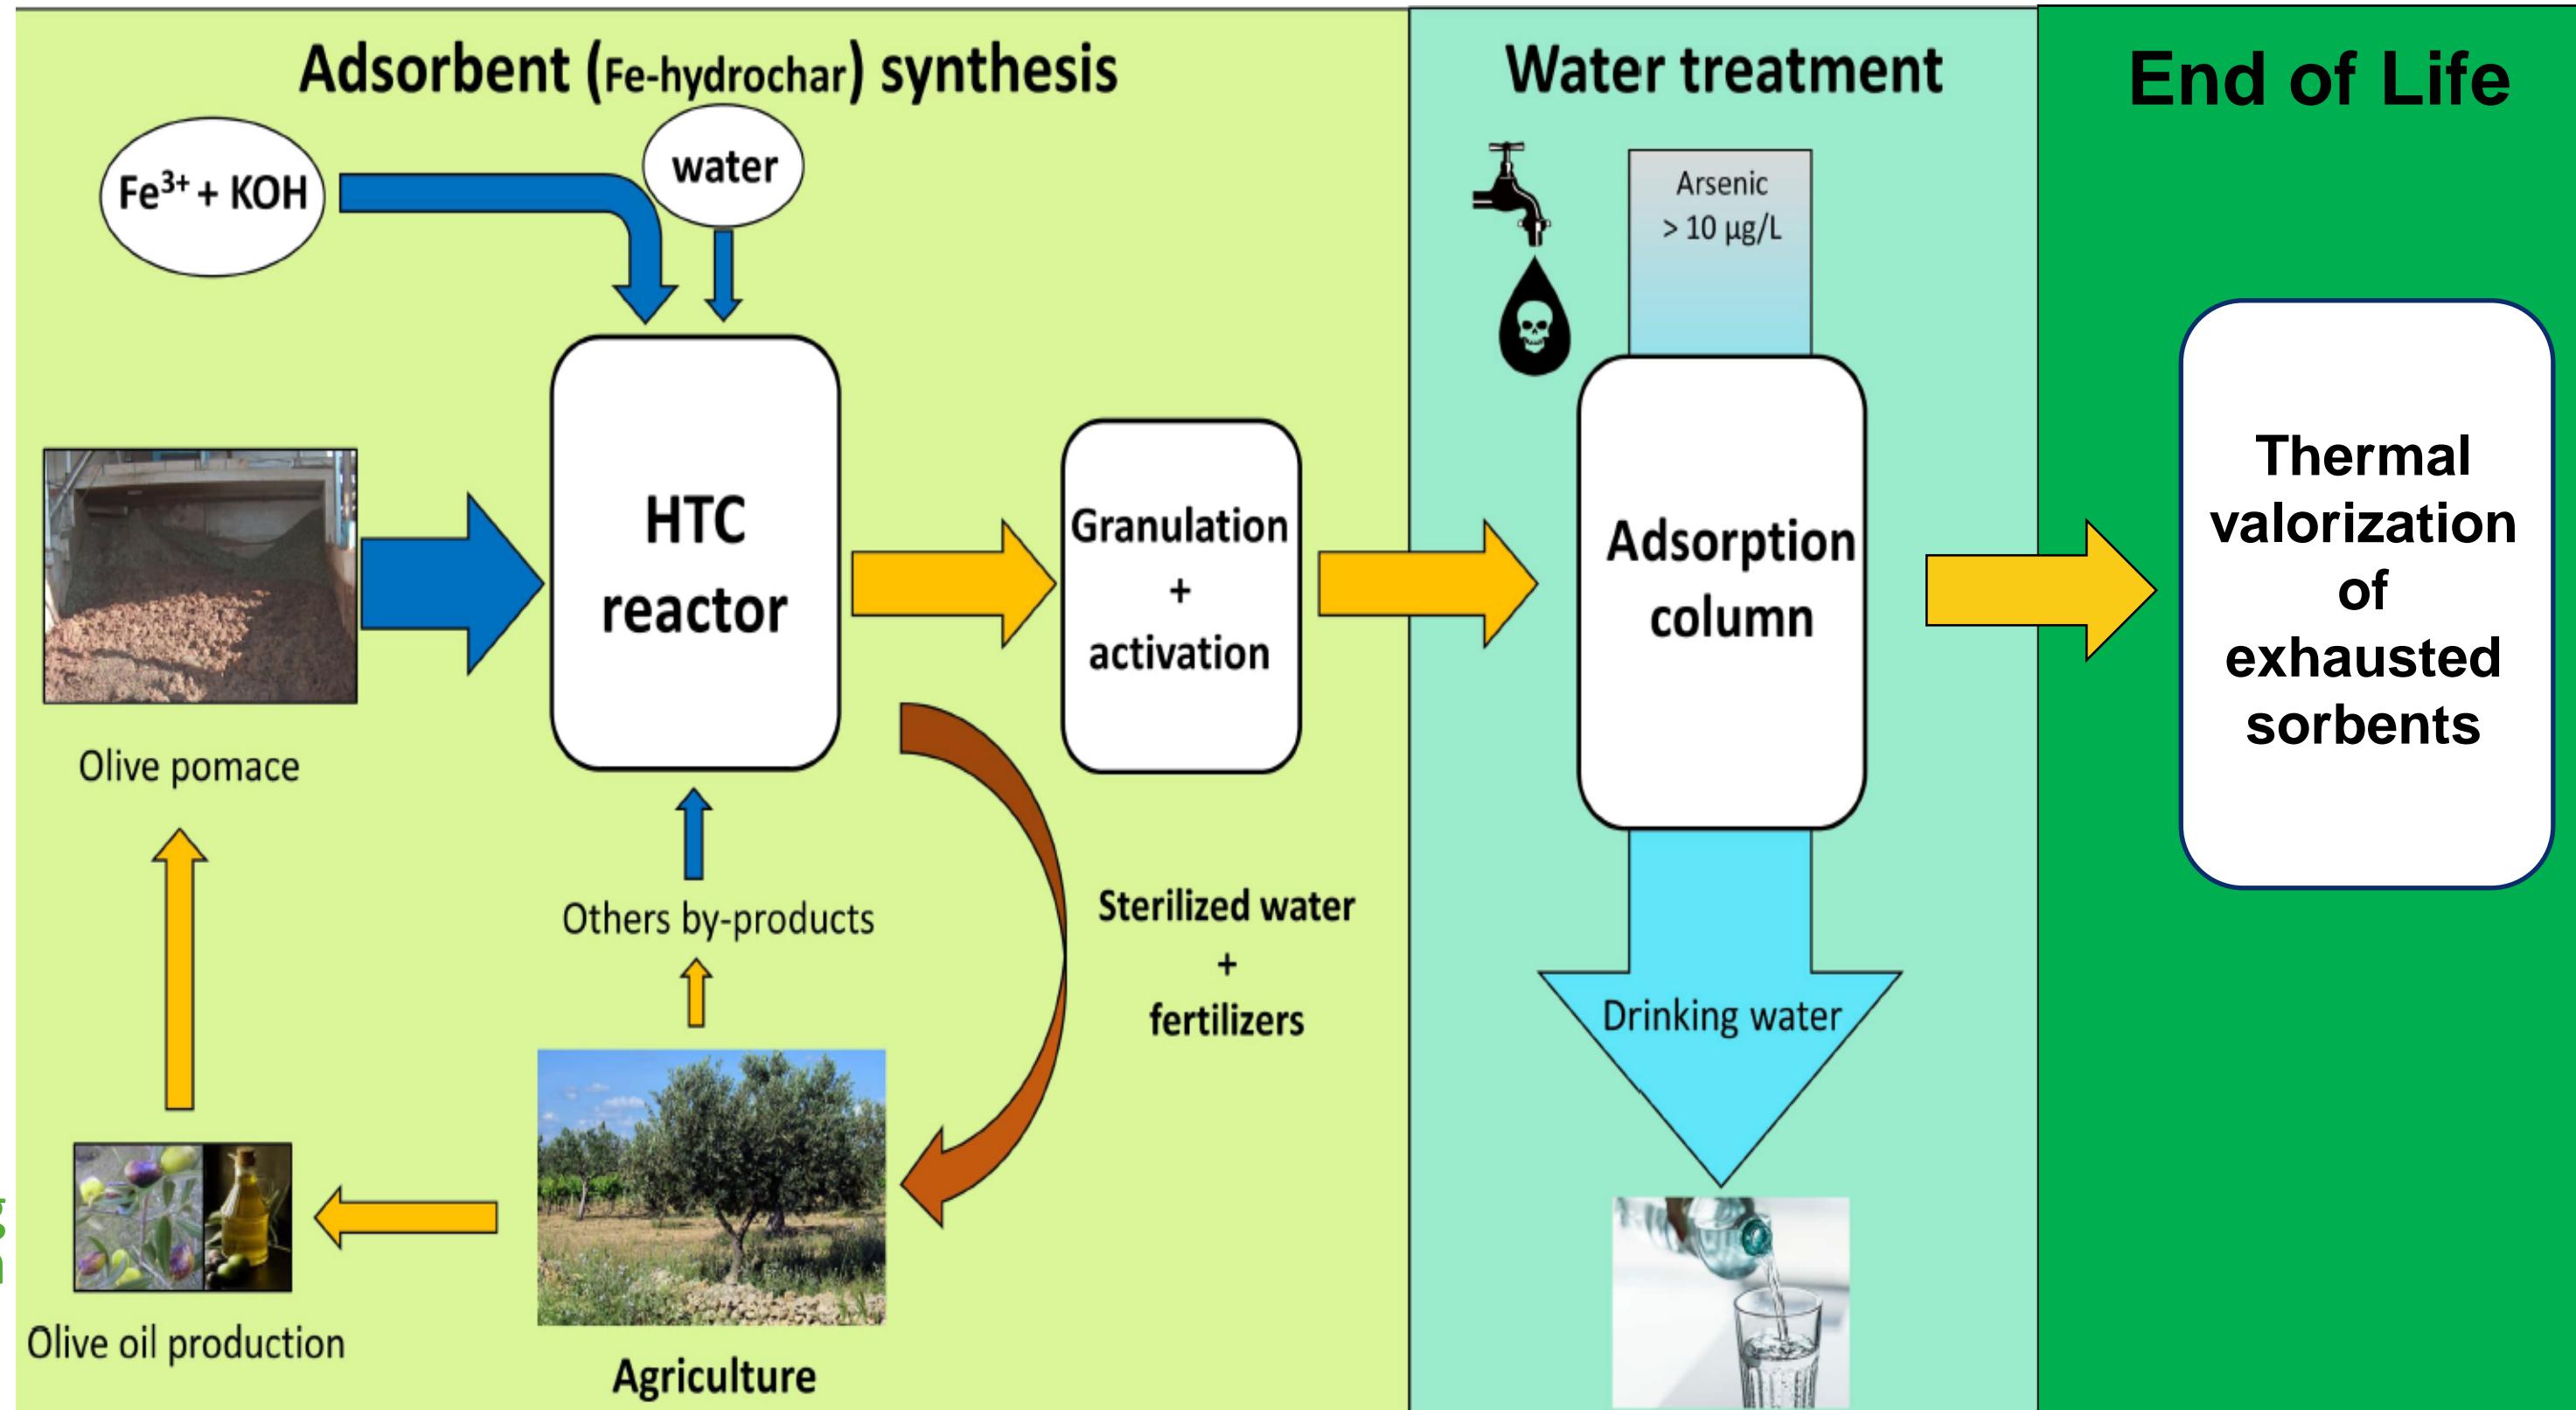

0 waste (producing fertilizers from soluble organics in HTC)

**5**

Producing energy from exhausted sorbents

**6**

Reducing wastes to be disposed off (-85%)

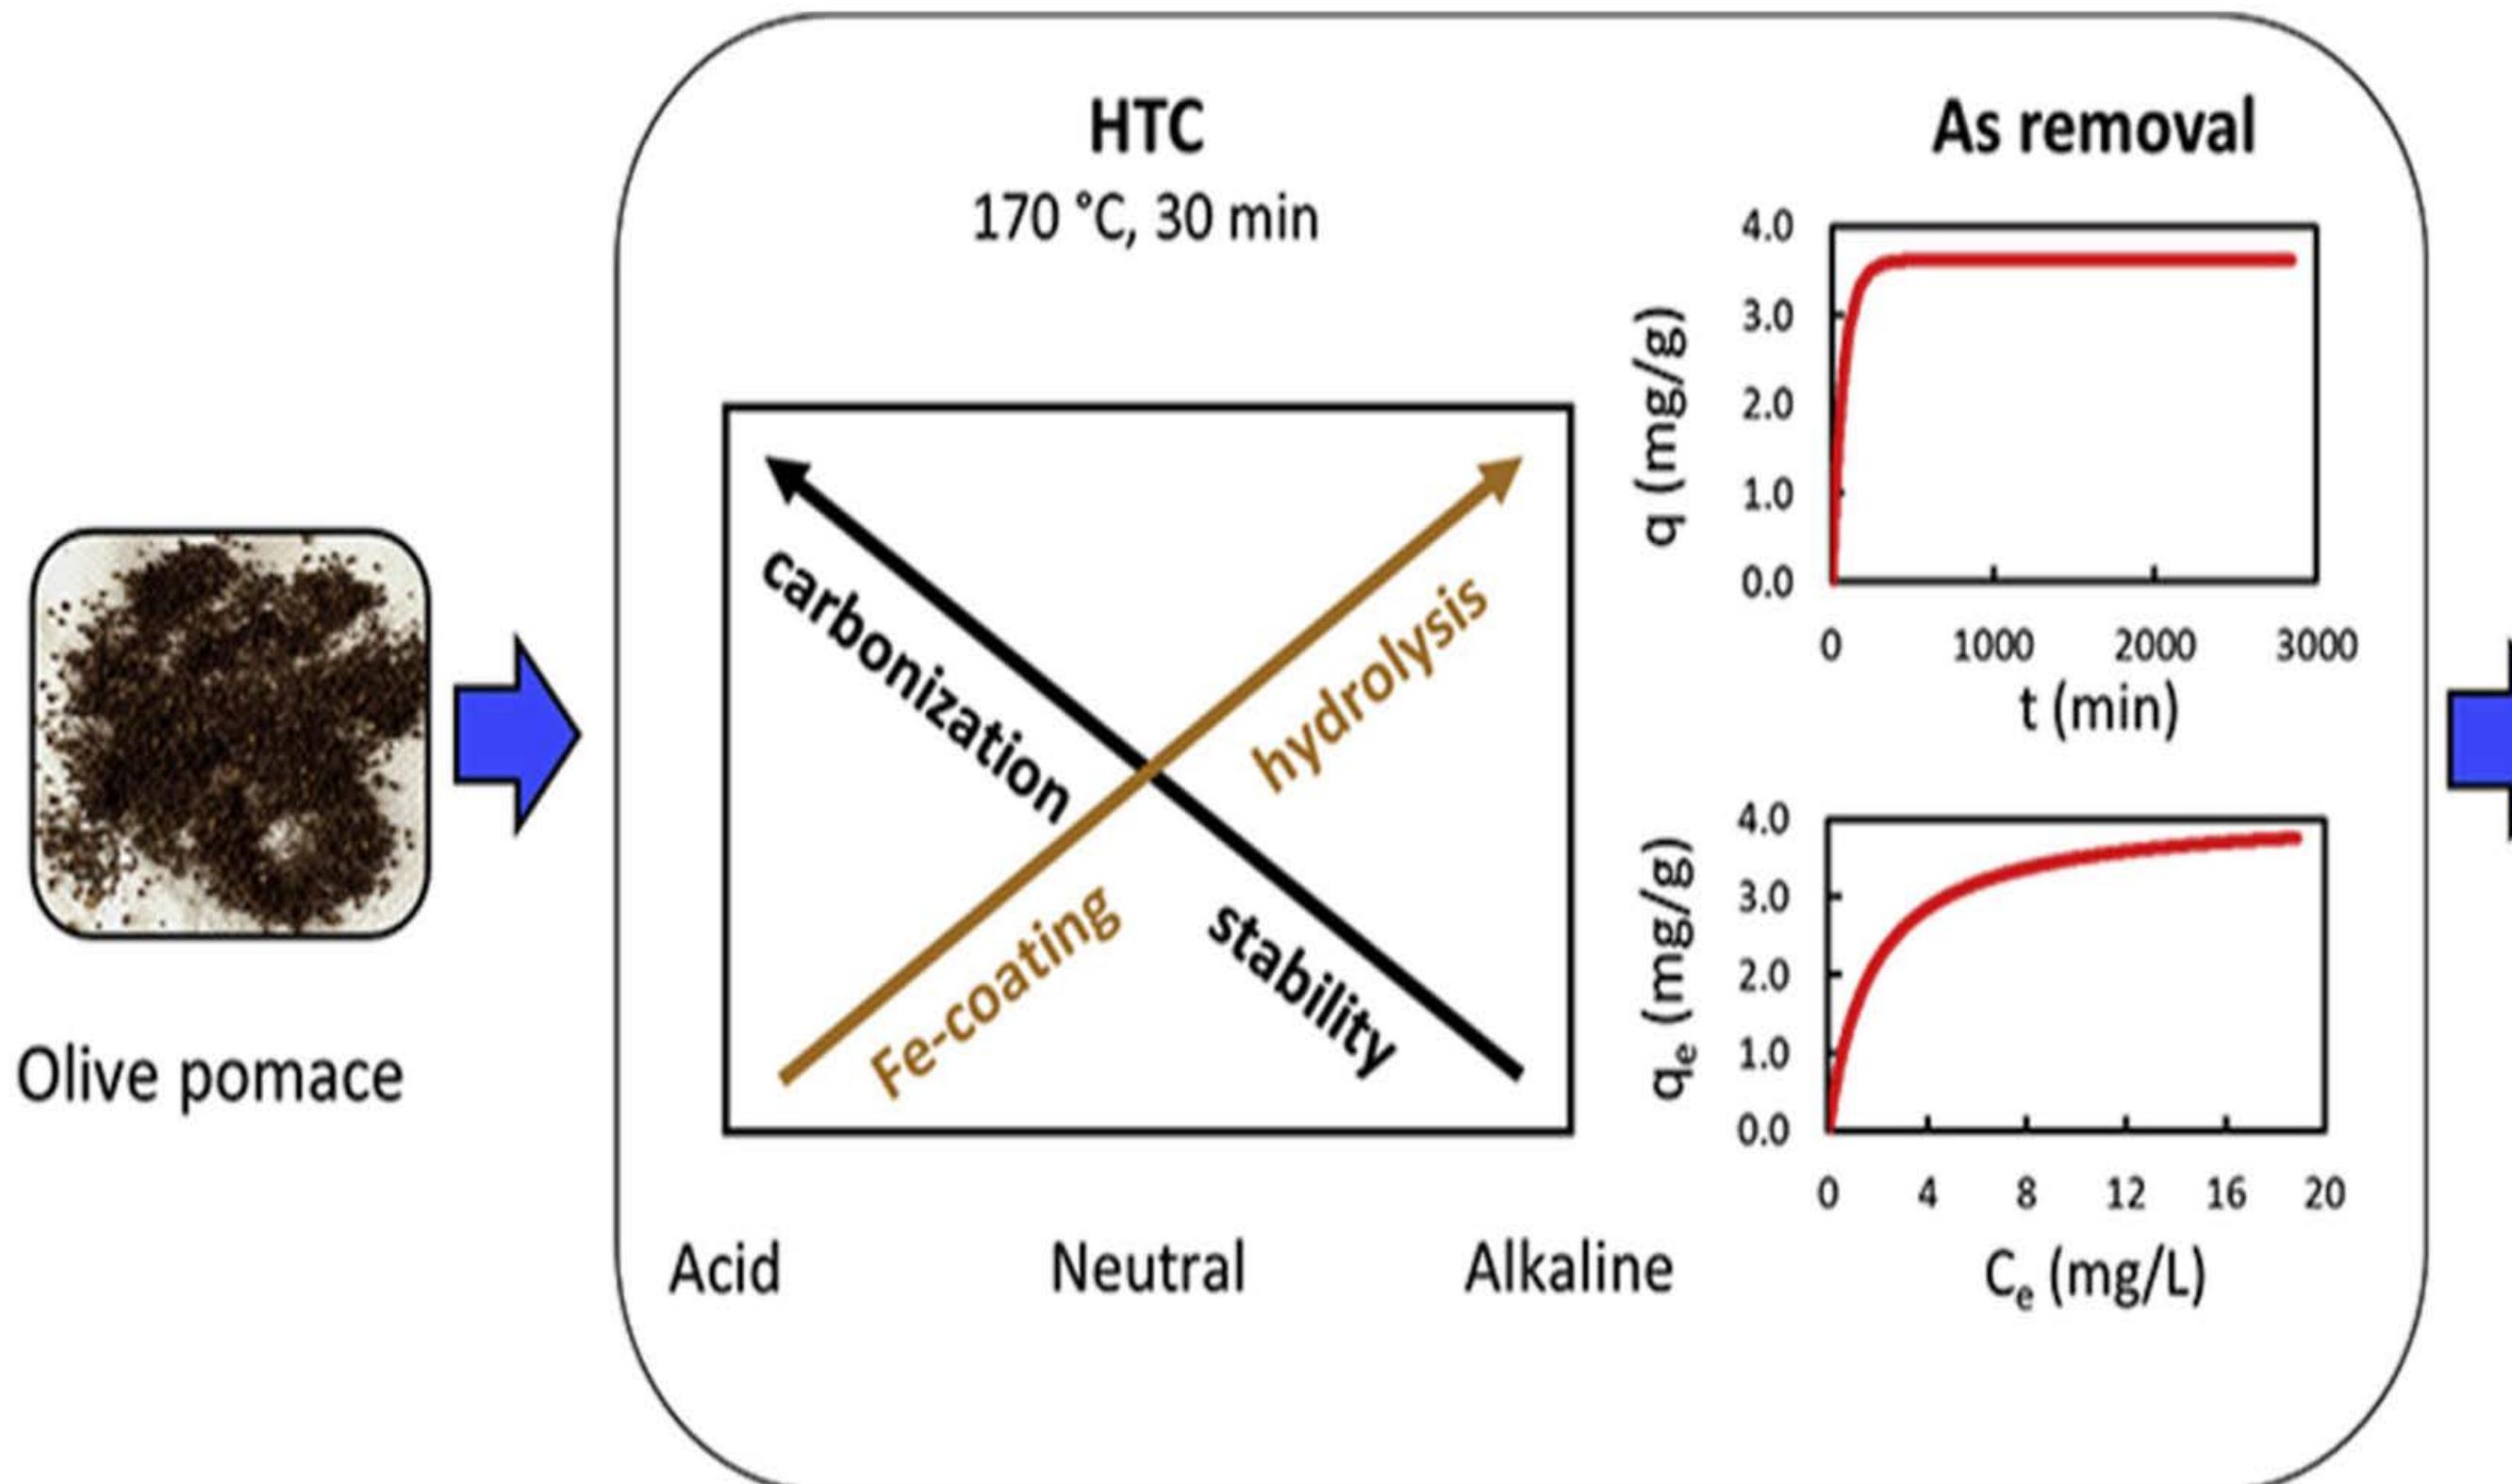

## MAIN PROJECT TARGETS

- Design and Construction **Prototype for Fe-hydrochar production (6.3 kg/d)**
- Design and Construction **Prototype for water treatment (0.55 L/s)**
- Design and Construction **Portable prototype for outdoor water purification (4 L/h)**
- Demonstration for Fe-hydrochar production → 1500 Kg Fe-hydrochar
- Demonstration for water treatment in Italy (Viterbo) → 5000 m<sup>3</sup> of As-bearing water at water depuration facility (240 inh eq)
- Replication in Portugal: Fe-hydrochar testing in portable water treatment prototype
- Transferability actions: **testing other biomasses and removing emerging organic pollutants (i.e. Bisphenol A)**
- Economic feasibility
- Environmental impact

## Supporting process design: Fe-hydrochar recipe optimization at Sapienza University

## Expected impacts

Objective	Indicators		END OF THE PROJECT		AFTER 5 YEARS*	
			Estimated Impact (absolute value)	Estimated Impact (in %)	Estimated Impact (absolute value)	Estimated Impact (in %)
<b>Improved Environmental and Climate Performance (including resilience to climate change)</b>	Waste management	Exhausted adsorbent to disposal	1.275 ton/y	-85%	1020 ton/y	-85%
	Water	Improved water quality for As removal	5000 m3/y	+36%	18980000 ton/y	+65%
<b>Better use of natural resources</b>	Reduced resource consumption	Iron salt	0.808 ton/year	-90%	647 ton/y	-90%
<b>Economic Performance, Market Uptake, Replication</b>	Employment	Jobs created	7 FTE		28 FTE	
	Replication / Transfer	N . of replication / Transfer	2			
	Reduction of cost per unit	adsorbent cost	3.05 Euros / kg	-49%	2.05 Euros / kg	-66%
<b>Communication, dissemination, awareness rising</b>	Awareness raising	Number of entities/individuals reached/ made aware	1000 per year		1200 per year	
	Website	Number of contacts/download of materials	1000 per year		1500 per year	

\* Industrial HTC plant in the Lazio region (Italy) producing 1200 t/y of Fe-hydrochar bio-adsorbent for the requirement of about 260'000 inhabitants equivalents

- Exhausted biosorbent can be gassified leaving only 15% solid residue to be disposed off

- 36% of the water demand of the Faleri area (Fabrica di Roma, Viterbo, Lazio) where public supply of drinking water was stopped because arsenic has a value of 40 µg/L

- Production of Fe-hydrochar bio-adsorbent needs 6% of iron against 60% of GFH

- Estimated cost of the Fe-hydrochar bio-adsorbent is 2.8 euro/kg against 6 euro/Kg for GFH
